Title	<i>Google Chrome, High-Severity Zero-Day Flaw Exploited in The Wild – Emergency Patch !!</i>
Id	<i>202212/Alert/07</i>
Code TLP	<i>White</i>
Risk Level	<i>High</i>
Application and service has been designed	<b><i>Google Chrome, Chromium-based browsers such as Microsoft Edge, Brave, Opera, and Vivaldi</i></b>
Version	<ul style="list-style-type: none"> <li>- <i>All Version less than <b>108.0.5359.94</b> for Mac and Linux</i></li> <li>- <i>All Version less than <b>108.0.5359.94/.95</b> for Windows</i></li> </ul>
Platform	<b><i>Windows, Linux and MacOS</i></b>
Update	<ul style="list-style-type: none"> <li>- <i>Upgrade to version <b>108.0.5359.94</b> for MacOS and Linux</i></li> <li>- <i>Upgrade to version <b>108.0.5359.94/.95</b> for Windows to mitigate potential threats.</i></li> </ul>
Summary	<i>In response to the active exploit of an open high-severity zero-day vulnerability (CVE-2022-4262) in the Chrome web browser, Google has released an emergency security patch to address the issue.</i>
Impacts	<ul style="list-style-type: none"> <li>- <i>Successful exploitation of this zero-day bug leads to crashes of the browser by reading or writing memory out of buffer bounds.</i></li> <li>- <i>The memory safety bugs can be triggered by a remote host, causing the ping program to crash.</i></li> <li>- <i>It may be possible for a malicious host to trigger remote code execution in ping</i></li> </ul>
Detailed Description	<p><i>On Friday, December 2, 2022, Google has released an emergency security patch to address the issue of the vulnerability referred to as CVE-2022-4262.</i></p> <p><b><i>The vulnerability referred to as CVE-2022-4262 (CVSS score: 9.6) concerns Type confusion in V8 in Google Chrome prior to 108.0.5359.94 allowed a remote attacker to potentially exploit heap corruption via a crafted HTML page. (Chromium security severity: High).</i></b></p>
Solutions	<p><i>Google has strongly recommended all users to immediately update their chrome in order to prevent any exploitation in the wild.</i></p> <p><i>Update your Chrome by following the simple steps that we have mentioned below:</i></p> <ul style="list-style-type: none"> <li>- <i>First of all, you have to select the Chrome menu.</i></li> <li>- <i>Then select the Help option.</i></li> <li>- <i>After that, you have to select the About Google Chrome option.</i></li> </ul>

	<ul style="list-style-type: none"> <li>- Now, wait for a few seconds, as Chrome will now automatically detect and download if there is any update available.</li> </ul> <p>Users are recommended to upgrade to <b>version 108.0.5359.94</b> for <b>MacOS</b> and <b>Linux</b> and <b>108.0.5359.94/.95</b> for <b>Windows</b> to mitigate potential threats.</p> <p>Users of Chromium-based browsers such as <b>Microsoft Edge, Brave, Opera, and Vivaldi</b> are also advised to apply the fixes as and when they become available.</p>
